### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose determining a fundamental pulse shape on the basis of a driving condition according to a condition of the printhead and changing a modulation amount of a pulse width depending on the number of simultaneously driven printing elements.

In the prior art, such as Stephany et al. and Rezanka, conditions such as the type of medium, the temperature of the head, the location of the printing element and the number of simultaneously driven printing elements are used to retrieve an appropriate pulse from a table. In contrast, applicant's claimed invention first determines a fundamental pulse based on a driving condition of the printhead, then modifies this pulse based on the number of simultaneously driven printing elements.

Rezanka discloses adding units of pulse width to a fundamental pulse, the number of units added being determined based on the number of simultaneously driven printing elements. Rezanka also subsequently teaches that other factors such as the temperature and location may be used to adjust the pulse width. However, a fundamental pulse is never selected based on a driving condition and then later modified based on the number of simultaneously driven elements. Rezanka does not state how the fundamental pulse is determined. The compensation for simultaneous driving, temperature, location and the like is all performed in one step by selection from a table.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. 5,036,337 to Rezanka.
